

浸入式加热器

Immersion heater

用途:
浸入式加热器是针对高端有色金属压铸行业而开发的高功率加热器，可用于定量保温炉、铝液保温炉、导流温度补偿除汽滤渣，转运等液态金属保温设备。

Purpose:
Immersion heaters are high-power heaters specifically developed for the high-end non-ferrous metal die-casting industry. They can be used in quantitative holding furnaces, aluminum liquid holding furnaces, temperature compensation and steam removal filters for flow guidance, as well as in liquid metal holding equipment such as transfer systems.

Melting furnace

控制柜 | Control cabinet

此控制柜可通过可控硅与PID算法控制加热器功率的输出比例，从而控制炉内金属液体的温度。

This control cabinet can control the output ratio of heater power through thyristors and PID algorithms, thereby regulating the temperature of the metal liquid inside the furnace.

- ① PID算法控制
PID algorithm control
- ② 铝液温度与加热器内部温度互锁联动，延长加热器寿命，降低能耗
The temperature of the aluminum liquid and the internal temperature of the heater are interlocked and interdependent, extending the lifespan of the heater and reducing energy consumption
- ③ 加热器异常日志
Heater anomaly log
- ④ DCS远程控制
DCS remote control
